New Features available April 23, 2007

Credible's commitment to easy to use, innovative and HIPAA compliant software continues with April's new features. Take advantage of new mobile software for Tablet PC and disconnected laptop, Episode tracking and enhanced customization.

Several new features and upgrades simplify data entry and make you work more efficiently.

April Software Spotlight: Tablet PC and Laptop, Front Desk Module Enhancement, One-click forms, Data Entry Simplification

Tablet PC and Disconnected Laptop Software—Now Available!

Credible's commitment to continuous innovation delivers another valuable breakthrough. Responding to customer requests for a mobile solution on devices other than handheld computers, Credible now offers software optimized for Tablet PCs and disconnected laptops. Leverage your existing investment in laptops or use the latest Tablet PC technology. Capture data remotely even when your staff is not connected to a network. As the leader in mobile behavioral health software, Credible's commitment to innovation helps your staff decrease paperwork and increase productivity.

Front Desk Features Taken to the Next Level

New Front Desk View allows easy access to multiple providers' calendars, scheduling templates for reserving specific visits for specific services, waiting list functionality and color coding visit types. Does your agency reserve a special time for intake or medication monitoring? Credible scheduling module simplifies this with easy to view screens and a logical interface.

Start Forms with One Click

Credible's commitment to simplifying documentation continues. With just one click from the Schedule, your staff can easily start documentation. This simplification works for scheduled appointments from the schedule tab or a user's homepage. This new feature reduces user clicks down to the absolute minimum of one.

Multiple Data Entry Eliminated

Enter data once in the client view and it can auto-populate all your required forms. It really is that easy. Data you complete on your electronic face sheet can be injected and/or mapped to specific forms.

Treatment Plan Module Upgrade

Your staff can access predetermined and/or pre-populated treatment plan options. More structured and outcome oriented treatment plans are now available. Your agency can determine recommended activities, actions and regimen and be certain your care staff are following your care model. Contact your Account Manager to set up this feature.

Episode and Incident Tracking

Now your agency can track specific events related to specific episodes or incidents. Individual forms and documents can be tied to specific time periods and episodes, allowing you to easily review activities and count unique occurrences and episodes. Intelligence built into the software assists with episode tracking, data capture, form completion and overall episode management.

Enhanced Customization

Individuals can now personalize their screens when viewing lists of data. When viewing client lists or visit lists, your staff can add specific fields from your electronic face sheet. User preferences will be saved from one login to another. Additionally, notifications can be manually hidden on the schedule once they've been viewed.

Simplified Group Documentation

Want to document for 15 group attendees? Credible allows individualize notes combined with general comments for all attendees. This feature optimizes your staff's time while accurately documenting group and individual activity.

HIPAA Log Conversion

Credible has enhanced our HIPAA log interface, displaying more information in an easy to view log. Now you can easily view and track client file access and changes, employee activity and data viewing. The new HIPAA log on client files include expanded categories and data. Users with the proper security settings can review employee access logs. Employee access logs can be retrieved with one click.

Enhanced Medication Management

Credible has added enhanced medication management functionality. Staff can easily store and display all medication changes while adding specific dosages and expiration dates. Medication history is a one click process. You can choose if you want your staff to have the ability to print active medications.

Billing and Insurance Upgrades

With the assistance of an inexpensive card scanner, Credible can now attach actual images of your clients' insurance cards to their billing file. NPI Update—Credible's ready for NPI numbers. Please notify us as your payer and states begin to accept NPI data.

We want to hear from you. If you have an idea, question, or comment regarding Credible Software Releases or our release process, please call or email Credible today!
